Selenium Webdriver Ui Testing Report

(YOUTUBE)

OVERVIEW:

In this project, I performed UI automation testing on the YouTube web interface using Selenium WebDriver. The objective of this testing was to verify the basic functionality of the YouTube user interface. The automation script was executed using Eclipse IDE and the browser used for testing was Google Chrome. The automation process included opening the YouTube homepage, performing a search operation, displaying search results, and opening a video from the results page. This testing ensured that the basic UI workflow of the YouTube interface works correctly when automated through Selenium.

TEST SCENARIOS:

- ***Test Case 1: Page Opened Successfully:*** Verifies that the YouTube **homepage** opens successfully in the browser.
- ***Test Case 2: Search Keyword Entered Successfully:*** Verifies that the search input field accepts the entered keyword and displays it correctly in the search bar.
- ***Test Case 3: Search Operation Executed Successfully:*** Verifies that pressing the search action triggers the search functionality and the search results page is displayed.
- ***Test Case 4: Video Opened Successfully:*** Verifies that the first video from the search results is successfully opened and the video player page loads correctly.
- ***Test Case 5: Browser Closed Successfully:*** Verifies that the browser session closes successfully

RESULTS:

1) IMAGE SHOWING THE PASSES TEST CASES

```
Javadoc   Declaration   Console   Terminal   Git Staging
<terminated> YouTubeAutomation [Java Application] C:\Users\Admin\.p2\pool\plugins\
Test Case 1: Page opened successfully
Test Case 2: Search keyword entered successfully
Test Case 3: Search executed successfully
Test Case 4: First video opened successfully
Test Case 5: Browser closed successfully
```

2) IMAGE SHOWING THE WHOLE CODE AND THE CONSOLE OUTPUT

```java
package youtubeTest;

import org.openqa.selenium.By;
import org.openqa.selenium.Keys;
import org.openqa.selenium.WebDriver;
import org.openqa.selenium.chrome.ChromeDriver;

public class YouTubeAutomation {

    public static void main(String[] args) throws InterruptedException {

        WebDriver driver = new ChromeDriver();

        driver.get("https://www.youtube.com");
        System.out.println("Test Case 1: Page opened successfully");

        driver.manage().window().maximize();
        Thread.sleep(3000);

        driver.findElement(By.name("search_query")).sendKeys("selenium tutorial");
        System.out.println("Test Case 2: Search keyword entered successfully");

        driver.findElement(By.name("search_query")).sendKeys(Keys.ENTER);
        System.out.println("Test Case 3: Search executed successfully");

        Thread.sleep(5000);

        driver.findElement(By.xpath("(//a[@id='video-title'])[1]")).click();
        System.out.println("Test Case 4: First video opened successfully");

        Thread.sleep(8000);

        driver.quit();
        System.out.println("Test Case 5: Browser closed successfully");
    }
}
```
